

Environmental Benefits

The proposed solar electric system will provide about 45,784 kWh of energy each year.

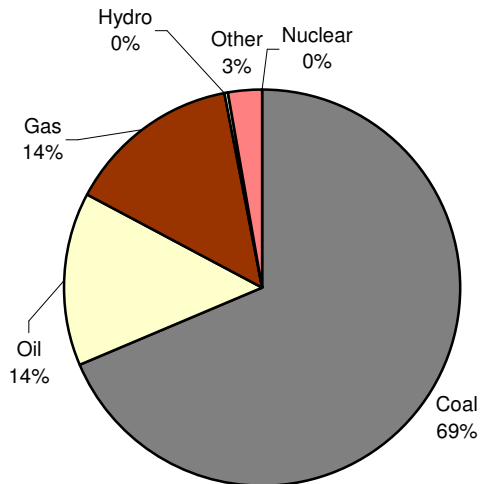

In Delaware it would prevent the generation of :

Carbon Dioxide	90237 lbs./year
Sulfur Dioxide	598 lbs./year
Nitrogen Oxides	160 lbs./year

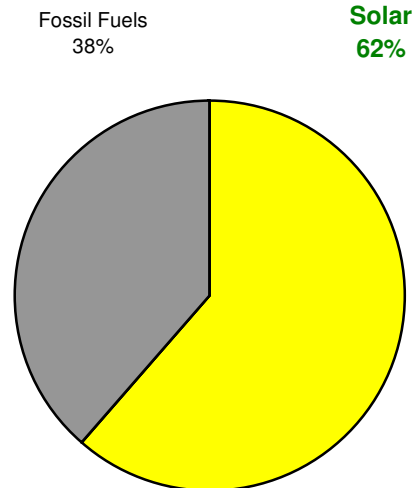

This amount of carbon dioxide is equivalent to emissions from driving 100,264 miles in an average U.S. passenger car each year.
